

SRIDHAR RAMAMOORTHY

Java Backend Developer | Spring Boot | Microservices | REST & SOAP APIs
+91 8608166504 | sridharramamoorthy7@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Backend Software Engineer with 3 years of experience designing and developing scalable, enterprise-grade applications using Java, Spring Boot, and Microservices. Hands-on experience building REST and SOAP APIs against both relational (MySQL) and NoSQL (MongoDB) databases, with Redis-based data caching to reduce latency. Delivered SOAP-based enterprise integrations with Oracle Fusion Cloud (HCM, Financials, CRM) and improved API response times by 25% through query and indexing optimization. Comfortable across the full deployment lifecycle — Docker, Kubernetes, Jenkins CI/CD, and AWS — with working knowledge of production monitoring (ELK, Prometheus, Grafana) and unit testing (JUnit, Mockito).

TECHNICAL SKILLS

Languages: Java 8+, Python

Backend: Spring Boot, Spring MVC, Spring Security, Microservices, RESTful APIs, SOAP Web Services, Hibernate, JPA, MyBatis

Databases & Caching: MySQL, PostgreSQL, MongoDB, Redis, Snowflake

DevOps & CI/CD: Docker, Kubernetes, Jenkins, CI/CD Pipelines

Cloud: AWS (EC2, ECS, EKS, S3, Lambda, IAM), Azure

Testing & Quality: JUnit, Mockito, Code Review

Monitoring & Logging: ELK Stack, Prometheus, Grafana

Concepts: OOP Principles, Design Patterns, System Design Fundamentals, Keycloak Authentication

Tools: Git, Bitbucket, Maven, Linux

PROFESSIONAL EXPERIENCE

ChainSys Corporation — Software Engineer

Oct 2025 – Present

Product: DataZap (ETL Platform)

- Developed and maintained backend modules for enterprise ETL workflows using Java and Spring MVC, supporting data integration across multiple enterprise systems.
- Built and enhanced RESTful and SOAP web services for data integration and workflow management, including XML request/response handling and API-level debugging for enterprise integrations.
- Built SOAP-based integrations to extract, pre-validate, transform, and load enterprise data into Oracle Fusion Cloud modules (HCM, Financials, CRM) using template-based structures such as job family and purchase order.
- Improved API response time by 25% by optimizing backend database queries through targeted indexing and creation of SQL views on frequently accessed ETL tables.
- Diagnosed and resolved production issues through root-cause analysis, enhancing legacy application modules for stability and performance.
- Collaborated with DevOps and support teams on deployment, monitoring, and production maintenance activities, including jQuery-based frontend fixes for internal workflow tools.

Environment: Java, Spring MVC, RESTful APIs, SOAP Web Services, XML, MySQL, MongoDB, Jenkins, AWS, jQuery

ShenII Technology Solutions — Associate Software Engineer

Jul 2023 – Sep 2025

Project: SHELOGISTICS (Logistics Platform)

- Contributed across the full project lifecycle, from architecture through deployment, on a platform built on four microservices: admin, transshipment, agent, and booking.
- Developed scalable microservices for shipment and logistics management workflows using Java and Spring Boot.
- Designed and implemented REST APIs supporting core logistics operations and inter-service communication, including shipment tracking and nearest warehouse/agent assignment logic based on geolocation distance calculations.
- Deployed and managed services using Docker, Kubernetes, and Jenkins, with CI/CD pipelines automating build and deployment on AWS.
- Applied Redis caching to reduce API response latency and improve backend performance across microservices.
- Monitored application health and performance using ELK Stack, Prometheus, and Grafana.

Project: APA (Vehicle Insurance Module)

- Developed backend functionality for the vehicle insurance module of an insurance-domain application using Java and MyBatis.
- Supported Kubernetes-based deployments, container orchestration, and application monitoring.
- Optimized MySQL database queries to improve data handling and application performance.
- Wrote unit tests using JUnit and Mockito to improve code reliability and catch regressions before deployment.
- Participated in debugging and production support activities.

Environment: Java, Spring Boot, Microservices, RESTful APIs, MyBatis, Hibernate, JPA, Docker, Kubernetes, Jenkins, AWS, MySQL, MongoDB

EDUCATION

M.Sc. — Information Technology, Yadava College, Madurai (2021 – 2023)

B.Sc. — Information Technology, Dr. SNS Rajalakshmi College, Coimbatore (2017 – 2020)

CERTIFICATIONS

Python Programming Certification — Hewlett Packard Enterprise (HPE)

STEP (Step For Communication) — The Hindu Group
